EXECUTIVE SUMMARY

Senior Application Manager with 5+ years of leadership in managing LIMS, scientific applications, and enterprise-grade platforms within regulated, high-availability environments. Expertise in application lifecycle management, cloud-native architecture, platform reliability engineering, and automated DevOps pipelines. I am skilled in performance tuning databases, CI/CD pipeline orchestration, and systems integration across R&D, manufacturing, and laboratory domains. Proficient in Azure cloud infrastructure, ITIL-compliant service management, and root cause analysis (RCA)/corrective and preventive action (CAPA) frameworks. Adept at modernizing legacy systems, optimizing uptime metrics, and implementing scalable automation solutions across diverse product ecosystems. Strong focus on platform resilience, predictive monitoring, and aligning technology strategies with long-term business goals.

CORE LEADERSHIP COMPETENCIES

- Application Portfolio Ownership
- Multi-Platform Architecture Understanding
- Product Engineering Collaboration
- Reliability/Ops Strategy (SLA, SLO, SLI)
- Process Governance (ITIL, Risk, Change Control)
- Cloud Transformation Leadership
- Technical Roadmap Planning
- Team Mentoring & Capability Building
- Vendor & Stakeholder Management

TECHNICAL EXPERTISE

Application & Platform Engineering

LIMS Systems • Scientific Applications • Multi-tier Enterprise Platforms • UAT/Validation Support • Integration Management • Release Governance • Version Upgrades • Legacy Decommissioning

Cloud & DevOps

Azure Cloud Platform • Azure AD • Azure Monitor • ARM Templates • Azure DevOps CI/CD • YAML Pipelines • IaC • Git / Azure Repos • Release Automation • Cloud Optimization

Database Engineering

SQL Server • Oracle SQL Developer • Performance Tuning • Backup/Restore • SSRS/SSIS • Query Optimization • Data Integrity • Capacity Planning

Monitoring & Observability

SolarWinds • Azure Monitor • Log Analytics • APM • Proactive Alerting • Power BI / Tableau Dashboards
• SLO/SLA Tracking

ITIL & Compliance

Incident/Problem/Change Management • RCA/CAPA • Validation Alignment • Audit Readiness • Risk Management • Documentation & SOPs

Automation & Scripting

PowerShell • Shell Scripting • SQL Automation • Log/Health Check Automation • Deployment Validation Scripts

PROFESSIONAL EXPERIENCE

Eurofins IT Delivery Center – Bengaluru, India

Senior Product Sustenance Engineer (Nov 2023 – Present)

Product Sustenance Engineer (Apr 2021 – Nov 2023)

Associate Product Sustenance Engineer (Dec 2019 – Mar 2021)

Responsibilities & Achievements

1. Enterprise Application Ownership & Platform Strategy

- Led end-to-end ownership of **LIMS and enterprise scientific platforms** used globally for laboratory operations and manufacturing quality workflows.
- Defined application strategies covering **scalability, integration roadmap, modernization, risk management, and lifecycle governance**.
- Partnered with engineering and QA to plan release cycles, validation activities, and impact assessments.

2. Cloud Modernization & Architecture Alignment

- Directed migration of legacy applications to **Azure Cloud**, leading ARM-based infrastructure provisioning, monitoring setup, and automated CI/CD pipelines.
- Implemented policy-driven deployments and environment parity enforcement to support **scalable, reliable multi-environment landscapes**.

3. Reliability & Operations Engineering

- Provided leadership across **24/7 global production operations**, ensuring SLA compliance and driving prevention-focused operations.
- Built predictive monitoring systems using **SolarWinds + Azure Monitor**, improving early incident detection by **40%** and reducing MTTR.
- Drove implementation of SLOs/SLIs for critical applications to strengthen reliability metrics across platforms.

4. DevOps & Automation at Scale

- Designed scalable CI/CD pipelines supporting multiple applications, standardizing deployment automation, health checks, and rollback logic.
- Reduced manual deployment activities by **35%** using PowerShell/SQL automation and centralized validation workflows.

5. SQL Performance Engineering

- Led database optimization efforts improving transaction performance by **25%** for high-volume scientific workflows.
- Implemented capacity planning, indexing strategies, and proactive maintenance supporting peak system loads.

6. RCA, CAPA & Incident Governance

- Acted as technical escalation leader for **Severity 1/2 global issues**, driving RCA, impact analysis, resolution, and long-term preventive measures.
- Standardized RCA templates created knowledge bases, and coached teams in issue pattern analysis.

7. Cross-Functional Leadership & Stakeholder Collaboration

- Managed alignment across engineering, QA/validation, infrastructure, InfoSec, and business stakeholders for release readiness, compliance, and SLAs.
- Mentored junior engineers and uplifted technical maturity through process standardization and structured training.

PROJECT HIGHLIGHTS

1. Azure Application Modernization Program

Transformed multi-tier systems to Azure Cloud with IaC-driven provisioning, CI/CD pipelines, monitoring, and automated deployment orchestration.

2. LIMS Integration & Scientific Workflow Enhancements

Designed and supported instrument/printer integrations, automated data pipelines, and improved lab throughput and compliance tracking.

3. Global Monitoring & Operational Analytics Platform

Built analytics dashboards combining Azure Monitor, SolarWinds, and ServiceNow to visualize environment health, SLA trends, and incident hotspots.

4. Legacy Decommissioning & Compliance Governance

Led retirement of applications include data archival strategy, validation documentation, and system shutdown compliance with audit standards.

5. Automated Operational Health Framework

Developed scripts and frameworks for automated pre/post deployment checks, reducing operational overhead by 50%.

KEY LEADERSHIP ACHIEVEMENTS

- ✓ Reduced P1/P2 incidents through automation, preventive alerts, and RCA frameworks
- ✓ Improved application uptime and reliability with SLO-driven operations
- ✓ Spearheaded global application strategy across multiple product lines
- ✓ Consistently awarded Star Performer (2020, 2021, 2023) & Spot Awards (2022, 2023)
- ✓ Standardized CI/CD and monitoring practices across teams
